REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

### **Input Format**

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

#### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

## Sample Test Case

```
Input: 5 10
    21 31 41 51 61
    3
    31 60 51
    Output: Value 31: Found
    Value 60: Not Found
    Value 51: Found
    Answer
    #include <stdio.h>
    #define MAX 100
    void initializeTable(int table[], int size) {
       for (int i = 0; i < size; i++) {
         table[i] = -1;
       }
    }
    int linearProbe(int table[], int size, int num) {
       int idx = num % size:
while (table[idx] != -1) {
idx = (idx + 1)^{\circ}
```

```
return idx;
     void insertIntoHashTable(int table[], int size, int arr[], int n) {
       for (int i = 0; i < n; i++) {
          int num = arr[i];
         int idx = num % size;
         if (idx < 0) idx += size;
         if (table[idx] == -1) {
            table[idx] = num;
         } else {
            table[linearProbe(table, size, num)] = num;
                                                                                     24,80,1026
     int searchInHashTable(int table[], int size, int num) {
       int idx = num % size;
       if (idx < 0) idx += size;
       int probed = 0;
       while (probed < size && table[idx] != -1){
         if(table[idx] == num){
            return 1;
          idx = (idx + 1)%size;
         probed++;
       return 0;
     int main() {
       int n, table_size;
       scanf("%d %d", &n, &table_size);
                                                                                     241801026
       int arr[MAX], table[MAX];
    for (int i = 0; i < n; i++)
         scanf("%d", &arr[i]);
```

```
